Technical Data Sheet

ASSEMBLY MATERIALS

Description

F620 SAC305-88M3 solder paste is a state-ofthe-art lead free no clean solder paste that promotes wetting and minimises soldering defects. The F620 flux system is specifically optimised for Sn/Ag/Cu alloy soldering. Extensive testing at customer locations has proven this paste to be capable of defect-free performance in the production environment. F620 SAC305-88M3 solder paste exhibits minimal slump and has excellent print-after-wait performance. Product Type: No Clean Solder Paste Product Name: F620 SAC305-88M3

Key Benefits

- Outstanding wetting
- Exceptional print to print consistency
- Min. 8 hours tack and work life

Applications

Printing

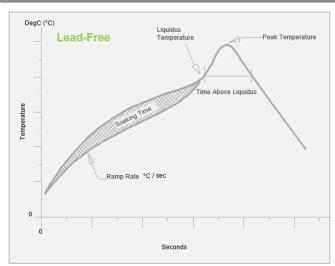

Product	Code	and	Alloy
---------	------	-----	-------

Product Code			Powder Properties					
	Paste	Alloy	Metal Content	*Viscosity	Powder Type	Particle Size	Alloy	Melting Point
	F620	SAC305	88%	м	3	25 - 45 µm	Sn96.5/Ag3/Cu0.5	217 °C
*	*D — Dispense grade M — Print grade H — Print grade high 1 — Dinning/letting grade Low							

*D = Dispense grade M = Print grade H = Print grade, high L = Dipping/Jetting grade, Low

Flux Activity		
Activity Level (J-STD 004)	ISO 9454-1 {DIN EN 29454-1}	Classification
RELO	1.2.2.C	No Clean/ Solvent Clean

Recommended Reflow Profile

* Graph not drawn to scale

Halogen Content

Halogen-Containing

Tolerances: CI or Br > 900 ppm, total > 1500 ppm; measured according to BS EN 14582

Recommended Profile		
Average Ramp Rate	1 – 3 °C/s	
	15 °C (min) –	
Peak Temperature	40 °C (max)	
	above Melting	
	Temperature	
Time above liquidus	45 – 90 s	
Reflow Atmosphere	Reflow in Air	
	or in N ₂ with	
Туре 3 – 5	< 2000 ppm 0 ₂	

The descriptions and engineering data shown here have been compiled by Heraeus using commonly-accepted procedures, in conjunction with modern testing equipment, and have been compiled as according to the latest factual knowledge in our possession. The information was up-to date on the date this document was printed (latest versions can always be supplied upon request). Although the data is considered accurate, we cannot guarantee accuracy, the results obtained from its use, or any patent infringement resulting from its use (unless this is contractually and explicitly agreed in writing, in advance). The data is supplied on the condition that the user shall conduct tests to determine materials suitability for a particular application)

Technical Data Sheet

Cleaning Instructions

After reflow flux residues may remain on the circuit and do not need to be washed. For cleaning of wet paste or if desired for cleaning of flux residues Zestron and Vigon cleaners can be used – see separate cleaning recommendations.

Storage

- Store the solder paste in tightly-sealed containers and avoid exposure to sunlight and high humidity
- Max expiration date: please refer to the expiry date on the label of the packaged product
- Storage condition in the refrigerator at 2 -10 °C
- Store cartridges with tip pointing downwards

Paste Preparation

- Remove paste from fridge: Before opening the package, leave paste for at least 4 hours (depending on jar/ cartridge size) at room temperature, so that paste warms up
- Do not open jar/cartridge while paste is cold to prevent condensation
- Do not heat the paste beyond room temperature
- Before using of paste jar: To obtain uniform, stable viscosity stir paste for 1 to 2 min, using a stainless steel or chemically resistive plastic spatula
- For further information see Technical Information
